MOUNTING BRACKETS

These brackets are for vertical mounting of rescue tools and are adjustable from 0-180 degrees, in 15 degree increments. These heavy duty, cast aluminum brackets are built to take the punishment of day-to-day use on fire and rescue vehicles. They hold the tools securely in place to avoid damage to the tools and the vehicle compartments. The patent pending, geared adjuster allows these brackets to be adjusted and remounted when a new truck is purchased. The mounting brackets allow the tools to be stored in a ready-to-use fashion, facilitating quick deployment and easy storage. The mounting brackets are powder coated to deter oxidation and galvanometric corrosion.

180 DEGREE ROTATION
